Eye Clinic Hospital Melaka cataract patients

SPSS version 25

Self embarrassment fear-0.76

Need others help-0.74

Rely on others-0.77

Less control on activities-0.72

Frustrated-0.69

(units-factor loading).

## Discussion and

## Conclusion

*Cataract patients had difficulties socially. Further studies should be done to see if social well-being improves after cataract surgery.*
